

Simplify Routine Water Analysis Deliver Results Faster

Automate key water quality parameters including Ammonia, Nitrate, Nitrite, Phosphate, Fluoride, Sulphate, Chloride etc on a single platform.

KPM SmartChem Discrete Analyzer

- Drinking Water Enviromental Monitoring
- Waste Water Industrial Water Testing

 **Connect with us and book a demo**

it should directly connect to whatsapp number., call or message

- Upto 300 to 600 tests per hour (depending upon the series)
- Automated Sample handling
- Supports IS, ISO, EPA, APHA methods
- Reduced manual work and reagent consumption
- Reduced cost per test

Common water parameter on SmartChem Discrete Analyzer

- Ammonia Nitrite Sulphate Fluoride
- Nitrate Phosphate Chloride Iron
- Manganese Phenol Cyanide Silica
- Hardness
- and many more...

Why choose

KPM SmartChem Discrete Analyzer

Automated Workflow

From startup to result generation, SmartChem minimizes manual intervention.

Microlitre Reactions

Lower reagent costs and reduced waste.

One Analyzer. Multiple Parameters.

Replace multiple standalone instruments.

Consistent Results

Automated workflows improve reproducibility.

Full Traceability

Barcode tracking and LIMS connectivity.

Faster Turnaround

Designed for High throughput Laboratories

Municipal Water Boards
Routine drinking water monitoring

Environmental Laboratories
Surface and ground water testing

STP & ETP Laboratories
Effluent compliance monitoring

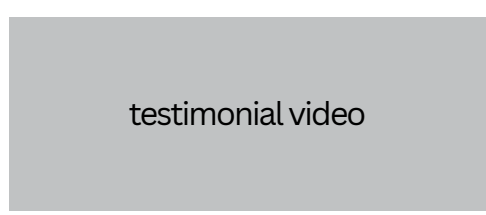

Industrial Quality Control Labs
Process and utility water analysis

Contract Testing Laboratories
Large sample loads with fast turnaround

Customer Success

Leading NABL Testing Labs, Pharmaceutical Manufactures in India automated water quality testing using KPM SmartChem Discrete Analyzer to improve throughput and efficiency
